OUR KNOWLEDGE IS YOUR PEACE OF MIND

Having an extensive portfolio of equipment and products ranging across the Energy, Aerospace, Nuclear and Marine Sectors, Cullum understand the importance of being able to provide reliable and trustworthy site support.

For over 60 years customer satisfaction has been key to our success, much of this built upon long term relationships emanating from installations and maintenance services undertaken by Cullum at customer facilities and job sites.

Our Site Services division provides experienced multi-disciplined Site Service Teams made up of our own dedicated personnel. Our capabilities include Mechanical, Electrical, Fluid System and Control System Installations and Maintenance.

Supported by office based Engineers, HSE Specialists and Construction Professionals our Site Teams can assist with everything from routine maintenance to the commissioning of turnkey projects both on and offshore, day or night.

Our Site Teams can be relied upon to deliver; minimising any disruption to your operating schedule.

Most importantly, Cullum ranks Safety as its Number One Priority, the well-being of our mutual employees and the environment in which we operate is continually assessed to ensure we meet the objectives and standards we strive to achieve.

In promoting a Positive and Proactive Health & Safety culture you can be assured that behind every operation we undertake at your facility is a commitment to safe working from the highest level of our organisation.

Effective planning is key to the success of any project and in our pursuit of excellence Cullum ensure risks are assessed, eliminated or reduced to acceptable levels before commencement of the work.

Detailed Method Statements ensure both Quality and Safety standards are adhered to and the work is only undertaken by SQEP (Suitably Qualified and Experienced Personnel).

Crane Lifting Studies, Asbestos Surveys and Environmental Assessments are performed as a matter of course and supported from our engineering and design offices.

Cullum offer a global service to the market sectors we support; whether it is Land Based, Offshore, Airside or a Nuclear Containment Area Cullum can provide the expertise you require:

- Installation and Commissioning of new equipment supplied by Cullum or other manufacturers.
- Installation of Gas Turbine and Driven Equipment.
- Installation & Maintenance of Gas Turbine Ancillary Systems including Fuel System, Lube Oil System, Water Injection and Wash System.
- Dismantling & Decommissioning.
- Enclosure and Facility Control Systems including Fire Detection and Fire Suppression.
- Installation of Fluid Systems including pipework.
- Electrical and Control System Installation & Maintenance.
- Data Acquisition & Facility Control System Maintenance and Calibration Services.
- Installation, Lifetime Care of Aerospace Test Facilities.
- Installation, Maintenance and Servicing of High Integrity Cranes.

- Outage Planning.
- Installation Supervision.
- Offshore Inspections, Installations and Life Extensions.

Assuring you of Quality at all times our activities are managed in accordance with ISO 9001:2008, and to meet our commitment to the environment we are accredited to ISO 14001:2004.

For all of your installation and maintenance requirements talk to Cullum Site Services and be ensured your Project is in Safe Hands.
