PRODUCT SUPPORT WHEN IT MATTERS

At Cullum we have always engineered our products to perform in the most demanding conditions. However, even the most durable components require periodic maintenance to ensure their efficiency and your productivity.

Providing a World Class Service to the Energy, Aerospace, Nuclear and Marine sectors, our dedicated Spares Team sets Cullum apart. Keeping your equipment running 24/7 is their key aim; by working together and managing your critical spares holdings we ensure your equipment operates at maximum efficiency and help to avoid any unplanned downtime.

Drawing from their in depth knowledge of Cullum products our highly motivated team will ensure your equipment and assets are supported with branded and warranted spares.

Cullum Spares are supplied with agreed levels of certification and delivered in accordance with ISO 9001:2008. Our global spares service is supported by an actively managed supply chain with the same commitment to quality as our own exacting standards. Due to the safety critical nature of much of our

equipment, many parts are specified and supplied for hazardous area operation in accordance with IEC, ATEX or US compliance for zoned equipment and include a full certification package upon delivery.

This World Class service can be supported by our Site Services Team who offer a site fitting and installation service to ensure complete peace of mind.

As part of our commitment to customer care we aim to identify risks before they become a problem. This service includes carrying out equipment inspections, condition assessments and obsolescence reviews for both land based and offshore applications.

Our philosophy supports a culture of Planned Preventative Maintenance (PPM) and ensures reliability of your assets and equipment is optimised.

For those unforeseen eventualities and breakdowns Cullum are always willing to offer a stockholding service of critical spares available for same day dispatch.

Our Spares Team are only a phone call away and can help with any of the below requirements:

- Spares and replacement parts for any Cullum in-service product.
- Spares and replacement parts for other Original Equipment Manufacturers.
- Full range of Gas Turbine Filter Elements, including static and pulse filter cartridges, including filter element up-grade options and complete field support.
- Ventilation Fire and Retention Dampers, Fan Motors, Bearings, Impellers or complete Fan Assemblies, complete with Hazardous Area Certification.
- Expansion Joint Fabrics and Acoustic Bolsters for Combustion Intakes, Combustion Exhausts (including over claddable fabrics for ATEX temperature compliance) and Ventilation Systems.
- Gasket Seals and Bolt Sets to ensure effective noise and pressure sealing of ducts and enclosure doors and openings.

Replacement or Refurbishment of Major Fabrications, including:

- Combustion Intake, Exhaust and Ventilation Silencers.
- Duct sections for all applications manufactured from all material grades and finishes (on short deliveries, where required).

Replacement items, including:

- Acoustic Enclosure items, such as Door Furniture, Interlocks, Hinges, Lights, Limit Switches, Gaskets and Seals.
- Filter House components such as Instrumentation Gauges, Limit Switches, Transmitters, Pulse Controllers, Pulse Solenoid Valves, Lights and Switches.
- Retrofit Safety Interlock Systems, supplied as kits of parts or fully fitted Onshore or Offshore.

Assuring you of Quality at all times our activities are managed in accordance with ISO 9001:2008, Cullum maintain Achilles registration, FPAL & UVDB and to meet our commitment to the environment we are accredited to ISO 14001:2004.
